# INTRODUÇÃO

Existem vários repositórios de informações que os motores de buscas não conseguem enxergar, ou seja, diferente das páginas convencionais e visíveis, a invisible web, termo dado a este tipo de prática, tem sua base de dados inacessível aos softwares que criam os índices dos motores de busca.

# A PAISAGEM DE DADOS ESTRUTURADOS

Unstructured queries

Consultas mais precisas para o motor de busca.

```

Estas tarefas são mais ambiciosas que o conjunto anterior.

Single-page structured queries

com consultas (palavra-chave) e obtêm uma lista de URLs de páginas web

## tor2web: visit anonymous websites

[Tor](#) is a software project that lets you use the Internet anonymously. [tor2web](#) is a project to let Internet users access anonymous servers.

Here's how it works: Imagine you've got something that you want to publish anonymously, like [the Federalist Papers](#) or [leaked documents from a whistleblower](#). You publish them via HTTP using [a Tor hidden service](#); that way your anonymity is protected. Then people access those documents through tor2web; that way anyone with a Web browser can see them.

### Getting started

Whenever you see a URL like `http://duskgytldkxiuqc6.onion/`, that's a Tor hidden Web service. Just replace `.onion` with `.tor2web.org` to use the tor2web proxy network. Example:

```
https://duskgytldkxiuqc6.tor2web.org/
```

This connects you with tor2web, which then talks to the hidden service via Tor and relays the response back to you.

**WARNING:** tor2web is only intended to protect publishers, *not readers*. You won't get the level of anonymity, confidentiality, or authentication that you would get if you were using a Tor client yourself. Using tor2web trades off security for convenience; [install Tor](#) for better results. ([More details...](#))
